* How to crawl.

There's a lot happening on my twitter feed!

The page shows the following statistics: 2,117 tweets, 10 following, and 4,18,547 followers. Below these stats is a 'Following' section which lists several accounts:

- Jesus Christ (@jesus_Carpenter, Healer, God)
- Al Gore (@al Gore)
- Climate Reality (@ClimateReality) - 'Reality. It's not an opinion.'
- Bethany Anne Lind (@bethanyanne) - 'Bathing time, Rock n' Roll Camp for Girls Los Angeles, person who is from L.A. and also lives in L.A.'
- Mona Tavakoli (@mona_tavakoli) - 'Not better, joke maker, kale encoder.'
- Marianne Williamson (@marriewilliamson) - 'Marianne Williamson is the best selling author of A RETURN TO LOVE'
- Dalai Lama (@DalaiLama) - 'Welcome to the official twitter page of the Office of His Holiness the 14th Dalai Lama.'
- Gregory Page (@GregoryPage) - 'It's never tomorrow, it's only today - G. Page'
- Todd Hoffman (@toddhoffman) - 'Student of life, Teacher of Living, Manager of Integrity, Jujutsu Human, Constant Life Tourist, I Love Living'
- bushwells (@bushwells) - 'original gangster of cleveland. hairy, nice guy... slightly disturbed, but mostly in love with you'

I'm going to miss something...

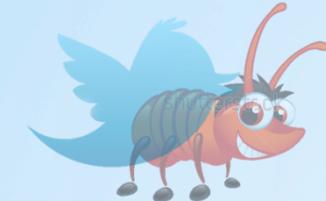

* How to crawl.

I love crawling the web though...

Let's kill two birds...

* How to crawl.

Twitter Crawl will highlight keywords on a page that you're browsing and show you tweets having to do with that keyword.

Screenshot of a Wikipedia page for "United States". A yellow highlighter has been used to draw a large, irregular shape over the left side of the page content, covering the sidebar and some of the main article text. The sidebar includes links for Main page, Contents, Featured content, Current events, Random article, Donate to Wikipedia, and Wikipedia Shop. It also lists languages available in the sidebar, such as Afrikaans, German, English, French, Spanish, and others. The main article text discusses the history and geography of the United States, mentioning the Louisiana Purchase, the Mexican-American War, and the purchase of Alaska. It also notes the country's status as a global military power and its role in international organizations like the UN Security Council.

Text: @WTFCrazyFacts: There are more women in China's military than there are people in the United States.

*How we did this.

*Overview:

- * Analyzed user's home timeline
 - * Extracted keywords from each tweet
 - * Created tags from these keywords
 - * Tagged the tweet
- * Parsed web page that a user is viewing
 - * Extracted keywords from the web page
 - * Highlight and display tweets that correspond to that keyword

*Technologies Used

- *Google App Engine
- *Twitter REST API
- *NLTK Python Library (for NLP: keyword extraction)
- *Chrome Extension Tools, Javascript

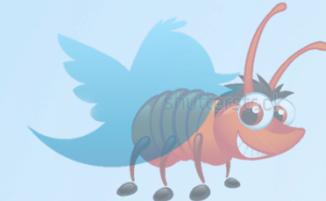

*Technologies Used

*Technologies Used

NLTK Python Library (for NLP: keyword extraction)

- * NLTK is a natural language toolkit for Python
- * Very powerful
 - * Many corpuses (e.g. dictionaries)
 - * Create tree structures
 - * Cleans text
 - * Calculates various distributions

NLTK 2.0 documentation

Natural Language Toolkit

NLTK is a leading platform for building Python programs to work with human language data. It provides easy-to-use interfaces to over 50 corpora and lexical resources such as WordNet, along with a suite of text processing libraries for classification, tokenization, stemming, tagging, parsing, and semantic reasoning.

Thanks to a hands-on guide introducing programming fundamentals alongside topics in computational linguistics, NLTK is suitable for linguists, engineers, students, educators, researchers, and industry users alike. NLTK is available for Windows, Mac OS X, and Linux. Best of all, NLTK is a free, open source, community-driven project.

NLTK has been called "a wonderful tool for teaching, and working in, computational linguistics using Python," and "an amazing library to play with natural language."

[Natural Language Processing with Python](#) provides a practical introduction to programming for language processing. Written by the creators of NLTK, it guides the reader through the fundamentals of writing Python programs, working with corpora, categorizing text, analyzing linguistic structure, and more.

Some simple things you can do with NLTK

Tokenize and tag some text:

```
>>> import nltk  
>>> sentence = "At eight o'clock on Thursday morning  
.... Arthur didn't feel very good...."
```
